

12/10

- Simplified policy for data collection
- Can learn if only a few samples, otherwise we don't know yet

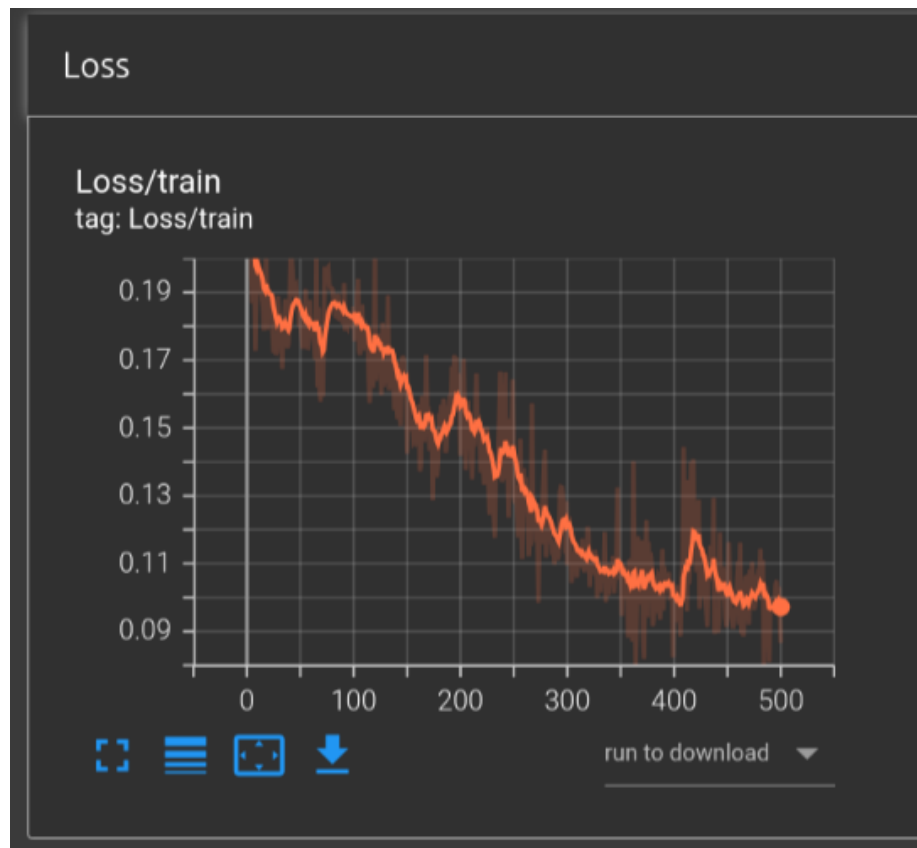

Figure 1: Training loss for the inverse dynamics problem

- Trained for 500 epochs on 1000 transitions
 - 500 epochs is 10x what I was training with before, so maybe just train for longer?
- More data (100k transitions) is being collected with this policy

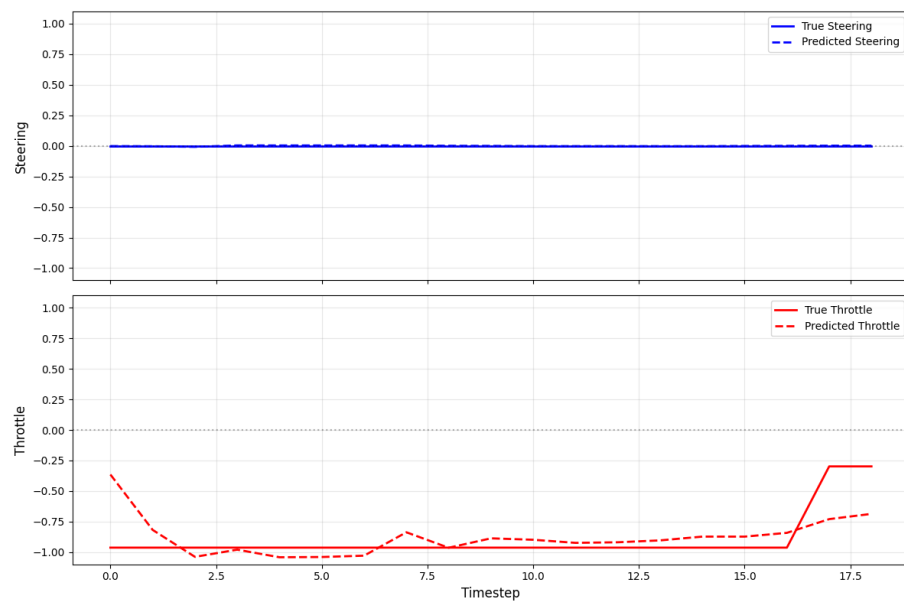

Figure 2: Sample output
